

A full-page photograph of two motorcyclists riding on a sandy, desert-like road. The rider in the foreground is on a black and white motorcycle with red accents, wearing a black jacket and a helmet with red, white, and blue graphics. The rider in the background is on a red and black motorcycle, wearing a black jacket and a helmet with blue and yellow graphics. Both motorcycles have black saddlebags. The background consists of large, reddish-brown rock formations under a clear sky.

MONOLOCK® SYSTEM

MonoLock®, a patented fitting system, designed for top cases with smaller capacity and usually used on scooter and small motorcycle. Even with limitations of maximum load, this system guarantees ease of use together with a high reliability and durability with components boasting lighter and far smaller dimensional restrictions. Because of its natural compatibility with different kind of motorcycles, it is appreciated by the most important brands of motorcycles producers.

MONOKEY® SYSTEM

Patented by GIVI, Monokey® Side represents an interesting evolution of the classic system constituted by the "fitment Kit plus the side-bag". The new solution introduces new advanced technical features and some other point of interest: the cases that adapt Monokey® Side can be recognized by shaped profile of the bottom and by the addition of two new fixing points, composed by "sleds". The latter receive the disengagement movement from the case release button and determine a significant and further increase in overall stability. Monokey® Side allows greater adhesion of the case to the side of the motorcycle, improving the aerodynamic aspect. The motorcyclist's habits won't change, since it will continue to open/close and attach / detach the case equipped with Monokey® Side with one key and push button.

FIXED® SYSTEM

Underbone street bike is the most common motorcycle type widely used in many Asian cities. Basic, yet slim rack system mounted on the motorcycle - great for everyday ride in heavy traffic congestion. Its compact locking and racking system combination - better fit the size and weight of the underbone street bike.
